

Nietzsche once said, "I want to teach men the meaning of their existence: which is the Superman, the lightning from the dark cloud man."

Balls of Fire: a Science of Life and Death

Publisher House:
Envision Editions Ltd.

Author: Judy Kay King

Spanning 5,000 years of history from ancient Egypt to our technoprogressive 21st century, the science reviewed in Balls of Fire builds on The Isis Thesis (2004) and 12 journal articles (2005-2013). The Isis Thesis is a semiotic study of ancient Egyptian literature, artwork, ritual, and architecture, showing that ancient Egyptian deities are signs for human and microbial genes and proteins evolving into a hybrid quantum species. The deities' activities describe the ancient glycolysis gene expression network in our cells and mirror the lifestyles of a complex bacterial virus that uses this ancient developmental pathway.

Surprisingly, other historical religious deities mirror the activities of Egyptian deities, so religion has also preserved an evolutionary science for survival of human DNA in a quantum environment. Balls of Fire presents evidence that our semiotic system is based on underlying physical and chemical principles inherited from our microbial ancestors, so our microbial DNA is ordering our society space. Examining human history through the dual lens of contemporary science and human behavior, the study shows that human beings have the potential to evolve at death into a unique hybrid species. Élite historical rulers have consistently veiled this evolutionary knowledge from humanity. However, our behavior has stamped an evolutionary viral footprint on the last 12,000 years of human history.

Fortunately, the pharaonic priesthood invented their ball-throwing rite or game of baseball to express scientific knowledge, so Balls of Fire uses the same model to convey the relentless evolutionary message present in ancient Egypt and human history. This model also defines our present position in history, which is destabilized.

For the creation of the baseball model, a fantasy-draft selection of two teams frames the historical power/knowledge grid, as well as the scientific argument for and against the Isis Thesis, while explaining the necessary context for what the theory predicts and scientific experiments confirm. This is accomplished by the draft of dead and living scientists, philosophers, writers and other creative artists, whose ideas are presented in two fantasy teams in order to tackle the mind-body problem that has confounded humans for centuries. Using this adversarial system, the reader determines the truth of the case through a transdisciplinary quest that prioritizes scientific research.

With the hope of understanding our position in history and the role of the evolutionary process, this book is organized into five sections: **Spring Training, Baseball Diamonds, Pregame, Fly-Ball Ferris Wheel, and Opening Day**. In Spring Training, one learns the science for understanding the hypotheses. The Baseball Diamonds section provides interviews with key players and a discussion of each team's argument. The Pregame section introduces the reader to the fantasy-draft selection of team managers, coaches, umpires, players and pitchers for **the Diamondhearts (primacy of mind) and the Thunderheads (primacy of matter)**, a model depicting historical and contemporary power grids. In the Fly Ball Ferris Wheel section, one examines several individuals who have caught history's high-flying balls of knowledge. Finally, Opening Day presents the Game of the Centuries, where the Thunderhead starting pitcher Pope Francis clashes with the Diamondheart pitcher-physicist Amit Goswami in an ideological battle for supremacy.

Balls of Fire exposes the hidden survival agenda in baseball, ancient cultures, alchemy, literary texts, Christianity, world visions, our sciences, and history itself. **Welcome to the Game of the Centuries.**
